

Dan Tucker leads Booz Allen's Digital Platform capability team, which leverages platform as a service (PaaS), container as a service (CaaS), big data platforms, and cloud-based infrastructures to assist clients in developing business functions and applications in a cloud-native environment. He sponsors strategic alliances with platform technology partners and coordinates innovation and development initiatives in the cloud domain.

Dan has more than 20 years of professional experience in full lifecycle systems development, with a strong technical background in architecture analysis, and lean development methodologies in the federal and private sectors. He also provided oversight for Booz Allen's continuous process improvement function, which maintains the organization's Capability Maturity Model Integration (CMMI) maturity level 5 rating, most recently refreshed in June 2016.

Dan leverages his background in Agile, DevOps, and lean systems development practices to identify and implement strategies aimed at optimizing productivity, increasing product quality, and reducing risk on large-scale systems development programs in the federal and commercial sector.

Dan holds a B.S. in mathematics from James Madison University.
