3 Signs Your Organization Needs TD SYNnex
Public Sector's Secure Software Factory (SSF)

Is Your Software Development and Deployment System Working As Well as It Could Be?

3 Signs Your Organization Needs TD SYNEX Public Sector's Secure Software Factory (SSF)

Keeping up with the ever-changing demands of the public sector is challenging.

With so many factors to manage and measure, it makes you question whether or not your software development and deployment system is working as well as it could.

- Your service delivery is slower than you'd like, leaving you at the mercy of vulnerabilities that appear with no notice.
- Legacy systems could be holding you back and leaving you at risk for threat and security issues.
- A lack of transparency into your assets prevents you from knowing exactly what you're working with and exactly what you need to do to innovate.

All of this, too often, leads to poor technology choices that cost organizations time and money.

At TD SYNEX Public Sector, we think it should be easier to assess and improve upon your software development and deployment cycle. You shouldn't have to manage a sea of vendors or feel stuck with legacy systems when what you really need to do is serve your people well.

We get it – and it's why we've created this simple PDF to help you get a sense of whether or not your software system is working as well and seamlessly as it could.

Sign 1: Your Software Development and Deployment Cycles are Slow

If you've been in the public sector for any time at all, you've likely felt the pain of slow application development.

It keeps you from innovating. It keeps you from making

the changes you need to stay relevant. And it keeps your organization from serving your people with excellence.

Not only that, when your service delivery is slow, it leaves your organization vulnerable to security threats that could be easily be avoided with a more robust development and deployment process.

“Trying to speed up service delivery times without expertise or a solid framework could sacrifice your organization’s security and leave you exposed.”

You might know your deployment times are slow – or you might have no idea just how long it’s taking. Either way, your organization deserves more.

What your organization needs is a **framework your team can count on** to develop and deploy applications with speed. TD SYNnex Public Sector’s Secure Software Factory framework can assess your current speed to deployment and unveil any vulnerabilities in your current system. With the insight from this framework and expertise from the TD SYNnex Public Sector team, you’ll streamline your development process, accelerate your deployment and reduce risk.

When you work tirelessly to accomplish your mission, you should be able to make changes and adapt the moment you need to – without the wait time. When you utilize TD SYNnex Public Sector’s SSF framework, you will.

Sign 2: Legacy Systems Pose a Risk to Your Organization

To serve your people with excellence, you have to mod-

ernize to stay up to date with what your people need. But your legacy systems are holding you back.

They make it nearly impossible to adapt to the ever-changing needs of the U.S. public sector. It slows you down and causes unnecessary work for your team. Plus, modernizing your system and migrating it could pose a serious threat to your stability. Vulnerabilities have the chance to run around unchecked and it’s hard to keep track of everything you must do to modernize successfully.

You don’t really have a choice, though. So what do you do?

As you modernize and migrate to a more streamlined platform, it’s critical you do so with expertise and precision to keep your organization protected at all costs. There’s a lot that could go wrong with any sort of modernization – and it’s why TD SYNnex Public Sector’s Secure Software Factory helps you execute your modernization and migration efforts with ease.

The SSF isn’t just another tech product – it’s a framework designed to assist your organization with technology decisions that will advance your ability to deliver services faster with more security. When you utilize this framework, TD SYNnex Public Sector partners with you to guide you through the process of modernization step by step so you can get your software to your end users faster. We’ll show you how to use it, and make sure your team is set up for success.

It is possible for you to modernize and do it without all the headaches. TD SYNnex Public Sector’s Secure Software Factory will guide you each step of the way.

If you and your organization are tired of being held back by legacy systems – and you know you need to innovate –

Is Your Software Development and Deployment System Working As Well as It Could Be?

TD SYNnex Public Sector's Secure Software Factory will help.

When you utilize this framework, you'll be able to modernize without wasting time or money. When you do, your organization will be able to focus on what you really need to – serving your people well.

Sign 3: You Don't Have a Framework that Streamlines Development and Deployment

When it comes to software development and deployment, there are a number of aspects you must take into consideration.

Compliance, security, time to deployment, vendors, potential downtime, operating issues and more...

And we have the solution to equip you with the right framework to address all of them.

TD SYNnex Public Sector is proud to offer the Secure Software Factory – a cloud-enabled framework that can automate all the steps in a modern software delivery process. SSF represents many ways to accomplish modern application development and can adapt to whatever process currently exists within your organization. This framework also helps you identify areas for potential improvement throughout the lifecycle that could save time, save money or increase speed.

Secure Software Factory serves as a baseline architecture that helps address design and development challenges, exposes architectural decisions and mitigates risks early in the development cycle. When you follow this framework, government agencies and organizations can develop applications that consistently meet standard of quality requirements and deliver excellent quality to their end users.

At TD SYNnex Public Sector, we understand that man-

aging software development and deployment is challenging. What you need is a clear plan to ensure you're able to identify gaps, vulnerabilities and opportunities in your development and deployment processes. The SSF framework is the one you need.

As a member of the public sector, you can't afford to work with a software system that continually presents challenges.

It should be simple to accurately assess and improve upon your software system.

All you really need is a framework and someone with expertise to help you uncover opportunities within your current system. Then once you uncover those opportunities, you need a partner you can trust who will guide you through the recommended improvement process.

When you work with TD SYNEX Public Sector and follow our Secure Software Factory, you don't get "just another vendor."

You get decades of expertise and a framework that will help you seamlessly and securely launch applications, overcome technology challenges, and continuously improve your processes to deliver value to stakeholders and users.

You'll ensure your workloads are secure throughout their lifecycle. You'll provide portability across heterogeneous, hybrid, and multi-cloud environments. You'll also enjoy using a framework that delivers software faster to achieve mission objectives.

If you know it's time for your organization to take a real look at how your software development system is working for you, we're here to help. Here's how it works:

1. We'll assess your current setup and present to you what opportunities exist to modernize your technology.
2. We'll then work with you to identify any gaps or vulnerabilities in your system. You'll be able to lean on our best practices and expertise to help unearth opportunities in your application development process.
3. Finally, we'll recommend the right solutions that will close the gaps for you, giving your organization exactly what you need to thrive.

With TD SYNEX Public Sector, you'll get a partner who's dedicated to your success. It's why we created this framework – to provide you with a holistic approach to improvement across your entire IT environment. The SSF framework will address all potential problems and concerns with your processes so you know exactly what you need to do to thrive. Not only that, our team of experts will guide you through the framework so you can automate and scale your software system.

"You get decades of expertise and a framework that will help you seamlessly and securely launch applications, overcome technology challenges, and continuously improve your processes to deliver value to stakeholders and users."

Speak to one of our application development experts today to see how TD SYNEX Public Sector's Secure Software Factory can unleash your agency's potential.
